Trans. of *Zavod[skaya] Lab[oratoriya] (USSR) 1959 [v. 25] no. 7, p. 850-853.

An examination is presented of instruments and apparatus for nondestructive testing by the eddy-current method. A coil probe, placed endwise on the surface being tested, serves as the measuring device in this apparatus. The basic principle of the functioning of instruments based on the application of the eddy-current method consists in recording the effect of the electromagnetic field of the eddy-currents by measuring the amplitude and phase of the current in the coil that excites them.
